

## ICD-10 Documentation Tips

### Internal Medicine Services

The following are important documentation tips and strategies for ICD-10 compliance:

General:

- Document diagnosis that were “present on admission” as POA.
- Include diagnoses monitored, treated, evaluated on discharge summary.
- Laterality should be specified for all body parts and sites.

Condition/Concept	ICD-10 Documentation Tips
<b>Abdominal Pain and Tenderness</b>	<p><b>Increased Specificity:</b></p> <p><b>Location:</b> e.g. Generalized, Right upper quadrant, periumbilical, etc.</p> <p><b>Pain or Tenderness Type:</b> e.g. Colic, tenderness, rebound</p>
<b>Acute Myocardial Infarction (AMI)</b>	<p><b>Timeframe:</b> An AMI is now considered “acute” for 4 weeks from the time of the incident, a revised timeframe from the current ICD-9 period of 8 weeks.</p> <p><b>Episode of Care:</b> Initial, subsequent, sequelae</p> <p><b>Subsequent:</b> Document “Subsequent” for a new AMI within 4 weeks of initial AMI.</p>

Condition/Concept	ICD-10 Documentation Tips
<b>Asthma</b>	<p><b>Terminology Difference:</b></p> <p><b>Cause:</b> Exercise-induced, cough variant, related to smoking, chemical or particulate cause, occupational</p> <p><b>Severity:</b> If persistent asthma, document mild persistent, moderate persistent, or severe persistent</p> <p><b>Temporal Factors:</b> Acute, chronic, intermittent, persistent, status asthmaticus, acute exacerbation</p>
<b>Diabetes Mellitus, Hypoglycemia and Hyperglycemia</b>	<p><b>Increased Specificity:</b></p> <p>The diabetes codes are combination codes that include the type of diabetes, the body system affected, and the complications affecting that body system.</p> <p>When documenting diabetes, include the following:</p> <p><b>Type:</b> e.g. Type 1 or Type 2 disease, drug-induced, due to underlying condition, or gestational</p> <p><b>Complications:</b> What (if any) other body systems are affected by the diabetes condition? e.g. Foot ulcer related to diabetes</p> <p><b>Treatment:</b> Is the patient on insulin?</p> <p>A <b>second</b> important change is the concept of “<b>hypoglycemia</b>” and “<b>hyperglycemia</b>.” It is now possible to document and code for these conditions without using “diabetes mellitus.” You can also specify if the condition is due to a procedure or other cause.</p> <p>A <b>third</b> important change is that diabetes is no longer classified as controlled or uncontrolled.</p> <p>The <b>final</b> important change is that the concept of “secondary diabetes mellitus” is no longer used; instead, there are specific secondary options.</p>

Condition/Concept	ICD-10 Documentation Tips
<b>Injuries</b>	<p><b>Episode of care:</b> Initial, Subsequent, Sequelae</p> <p><b>Injury site:</b> As specific as possible</p> <p><b>Etiology:</b> How was the injury sustained? (e.g., sports, motor vehicle crash, pedestrian, slip and fall, environmental exposure, etc.)</p> <p><b>Place of Occurrence:</b> School, work, etc.</p> <p><b>Intent:</b> Unintentional or accidental, self-harm, etc. if appropriate</p> <p><b>Status:</b> Civilian, military, etc. if appropriate</p>
<b>Otitis Media</b>	<p><b>Type:</b> e.g., Serous, sanguineous, suppurative, allergic, mucoid</p> <p><b>Infectious Agent:</b> e.g., Strep, Staph, Scarlet Fever, Influenza, Measles, Mumps</p> <p><b>Temporal factors:</b> Acute, subacute, chronic, recurrent</p> <p><b>Laterality:</b> e.g. Left, right or both ears</p> <p><b>Tympanic membrane rupture: Note if present.</b></p> <p><b>Secondary causes:</b> e.g. Tobacco smoke, etc.</p>
<b>Sepsis</b>	<p><b>Etiology:</b> Link to source of infection: Vascular grafts, Devices, Implants, Infection (Pneumonia, UTI, Peritonitis, etc.)</p> <p><b>Organism:</b> Organism, if known</p>
<b>Shock</b>	<p><b>Type:</b> Hemorrhagic, Septic, Cardiogenic, Liver, Hypovolemic, Other</p>
<b>Tobacco</b>	<p><b>Usage:</b> Use, Abuse, Dependence, Exposure, Frequency</p>
<b>Ulcers</b>	<p><b>Type:</b> Decubitus, Ischemic, DM, Stasis</p> <p><b>Location:</b> Upper back, ankle, sacral, buttock, etc.</p> <p><b>Stage:</b> Decubitus only (stage 1-4 or unstageable)</p> <p><b>Present on Admission</b></p>

Condition/Concept	ICD-10 Documentation Tips
Underdosing	<b>Type:</b> Intentional, Unintentional, Non-compliance <b>Reason:</b> Financial hardship, age-related disability, etc.
